YTS Compactor Roller

The compact track talent

The effective additional equipment for snowmobiles for compacting soft- or new-snow for skating and classic cross-country trails, practice slopes and hiking trails with an additional profile finisher for a compact, stable snow sole with a gripping surface.

The YTS Compactor Roller is available in four variations to meet your needs. Subsequent modification is easily possible if necessary. Even with a low snow depths, when it impossible to use a snow groomer, is a reliable grooming possible. Surface icing is torn up with the additional renovator in front of the roll and processed into a uniformly grippy slope. The additionally attachable tracksetter enables the simultaneous creation of tracks according to the FIS standards.

The big roller makes it easy to pull and provide maximum compaction with minimal trailer load. Slopes, cross-country or hiking trails are completely compacted and the surface finish is created in one step. The strong construction stands for a longlife and the hard plastic roller allows to overcome a short snow free streetsection. Let yourself be convinced by our compact track talent.

Technical Specifications

	Variant 1	Variant 2	Variant 3	Variant 4
System	Compactor Roller	Compactor Roller with renovator before the roller	Compactor Roller with tracksetter	Compactor Roller with renovator and tracksetter
Working width of integral finisher incl. wings	1.95 m	1.95 m	1.95 m	1.95 m
Roller width	1.65 m	1.65 m	1.65 m	1.65 m
